Shubhanshu Manjare

shubhumanjare@gmail.com | +91-8329882859 | github.com/shubh658

EDUCATION

SYMBIOSIS INSTITUTE OF TECHNOLOGY
B.Tech in CSE
Grad. May 2028 | Nagpur, India
Cum. GPA: 7.0 / 10.0

COURSE WORK

Undergraduate: Data Structures & Algorithms, Operating Systems, Database Management Systems, Object-Oriented Programming, Computer Organization, Theory of Computation, Compiler Construction, Computer Networks, Data Compression, Python Programming, Database Foundations, Microcontroller and Embedded Systems, Basic Electrical & Electronics Engineering (BEEE)

SKILLS

Programming: C, Java, Python

Web Development: HTML, CSS, JavaScript

Database: MySQL

Tools: Git/GitHub, Jira, VS Code

PROJECTS

Smart Attendance System

Python | OpenCV | MySQL

- Built an automated attendance system that records student presence digitally, removing manual roll calls and proxy attendance.
- Stored attendance records in a MySQL database with date-wise and student-wise tracking for easy retrieval.
- Generated attendance reports that give faculty a quick view of individual and class-level attendance.

Face Recognition Attendance System

Python | OpenCV | Face Recognition Library

- Developed a real-time attendance system that detects and identifies faces from a live camera feed.
- Matched detected faces against a stored dataset of registered students and automatically marked attendance with a timestamp.
- Exported attendance logs to a structured file/database to prevent duplicate entries and manual errors.

Automated Traffic Signaling Mechanism

Python | Embedded Sensors | Microcontroller

- Designed a traffic signal control mechanism that adjusts signal timing based on real-time traffic density instead of fixed timers.
- Used sensor input to detect vehicle congestion on each lane and give priority to the busier road.
- Aimed to reduce waiting time and congestion at intersections through adaptive signal switching.

Cardiovascular Disease Detection using Explainable AI

Python | Scikit-learn | SHAP / LIME | Pandas

- Built a machine learning model that predicts the risk of cardiovascular disease from patient health parameters.
- Applied Explainable AI techniques (SHAP/LIME) to show which factors (age, blood pressure, cholesterol, etc.) drive each prediction.
- Compared multiple classification models and evaluated them with accuracy, precision, recall, and F1-score.

Public Safety Incident Reporting Agent

Python | LLM / Agentic AI | Database

- Created an AI agent that lets citizens report public safety incidents (accidents, hazards, emergencies) in natural language.
- Automatically extracts key details such as incident type, location, and severity and organizes them into structured reports.
- Routes and logs reports for faster review and response by the concerned authorities.

CERTIFICATIONS

Red Hat System Administration I (RH124)
Red Hat | 40 Credit Hours | February 2026

Network Automation with Red Hat Ansible Platform (DO457)
Red Hat | 32 Credit Hours | July 2026

Python Programming with Red Hat (AD141)
Red Hat | 32 Credit Hours | March 2026

Mastering Agentic AI: From Prompt to Protocols to Production
Udemy | 38 Hours | July 2026

HOBBIES

Purchasing cars, gyming, gaming
